Dec. 1, 2020

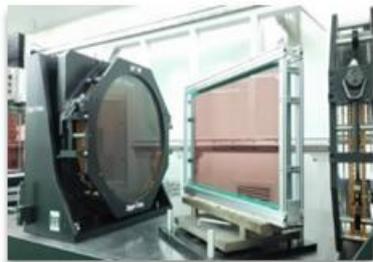

Outline

- **Motivation**
- **Design progress**
- **Current progress**
- **Future works**

Outline

- **Motivation**
- Design progress
- Current progress
- Future works

1. Motivation

Laser optics

In 1960, the first laser by Maiman

Lasers have been widely applied in different fields

SULF

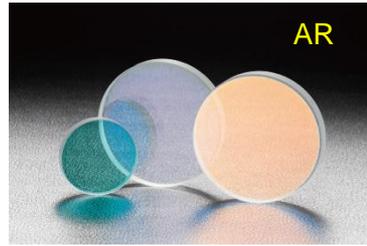

Laser based innovations in the future:

- Miniature beam
- Laser based clock
- Ultrashort lasers
-

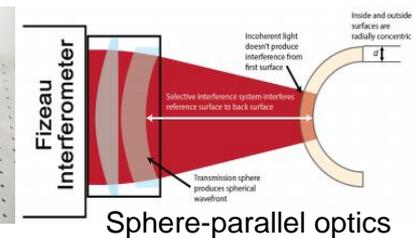

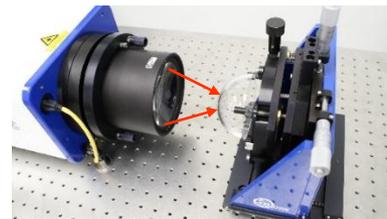

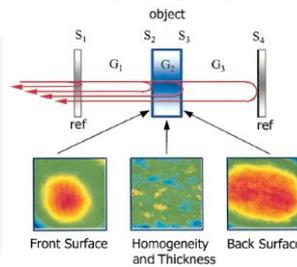

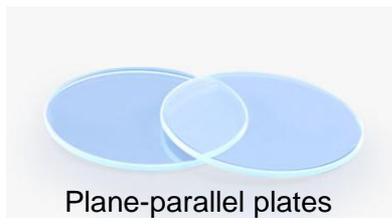

1. Motivation

Requirements

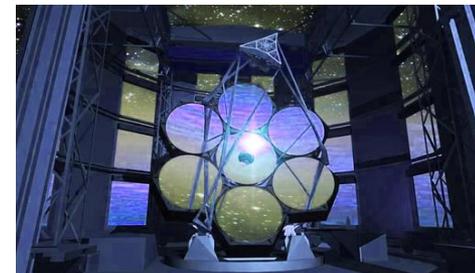

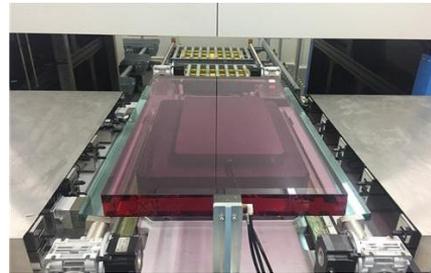

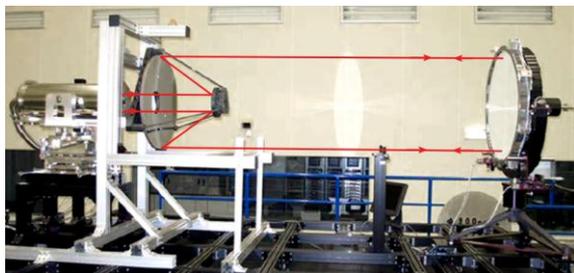

■ Optical coating elements

■ Parallel multi-surface elements

■ Large Optics

1. Motivation

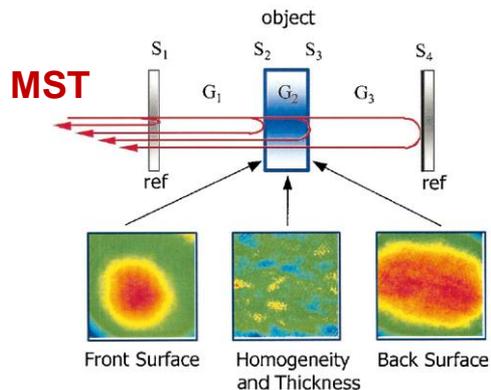

Substitute for similar products

- 4" laser interferometers (mainframe)

Zygo Verifire™ MST (4")

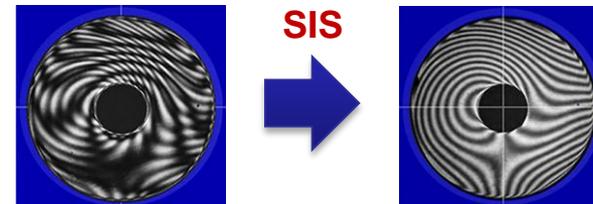

- Wavelength phase-shifting

4D FizCam (4")

... ..

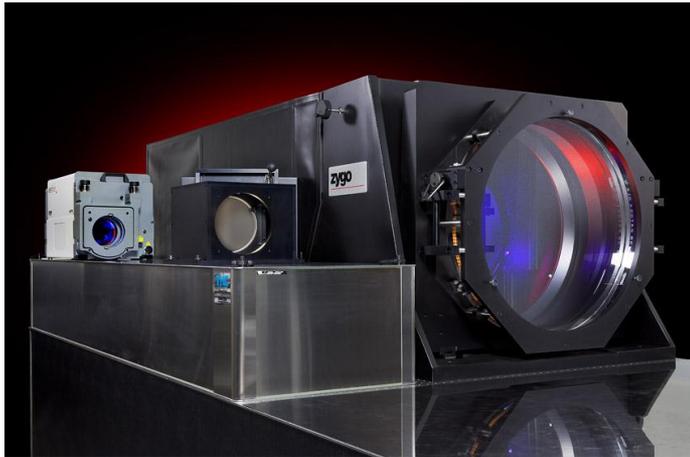

- Common path short-coherence
- Polarization phase-shifting

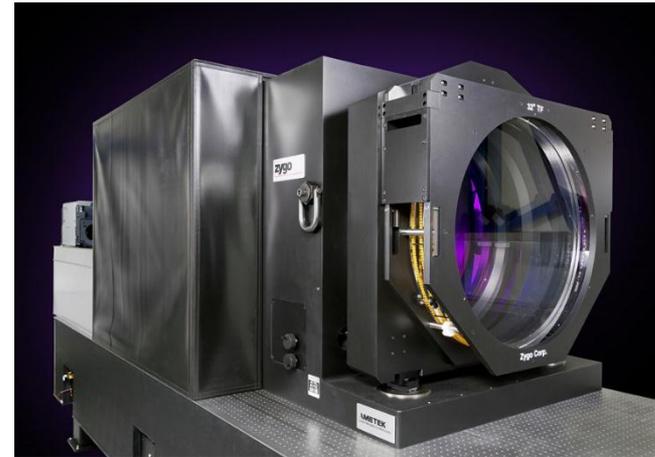

1. Motivation

Substitute for similar products

- Large-aperture interferometers

Zygo Verifire™ (24")

Zygo Verifire™ (32")

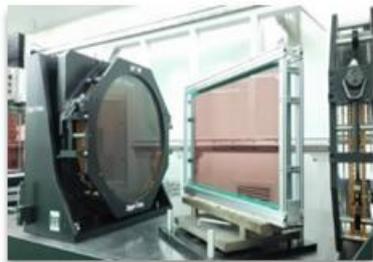

4D Fizcam (18")

Right to left: AccuFiz Fizcam Interferometer, with 100-300 mm Aperture Converter, 300 mm Phase-Shifting Tip/Tilt Mount and 300 mm Tip/Tilt Mount.

- **Design progress**
- Current progress
- Future works

2. Principles

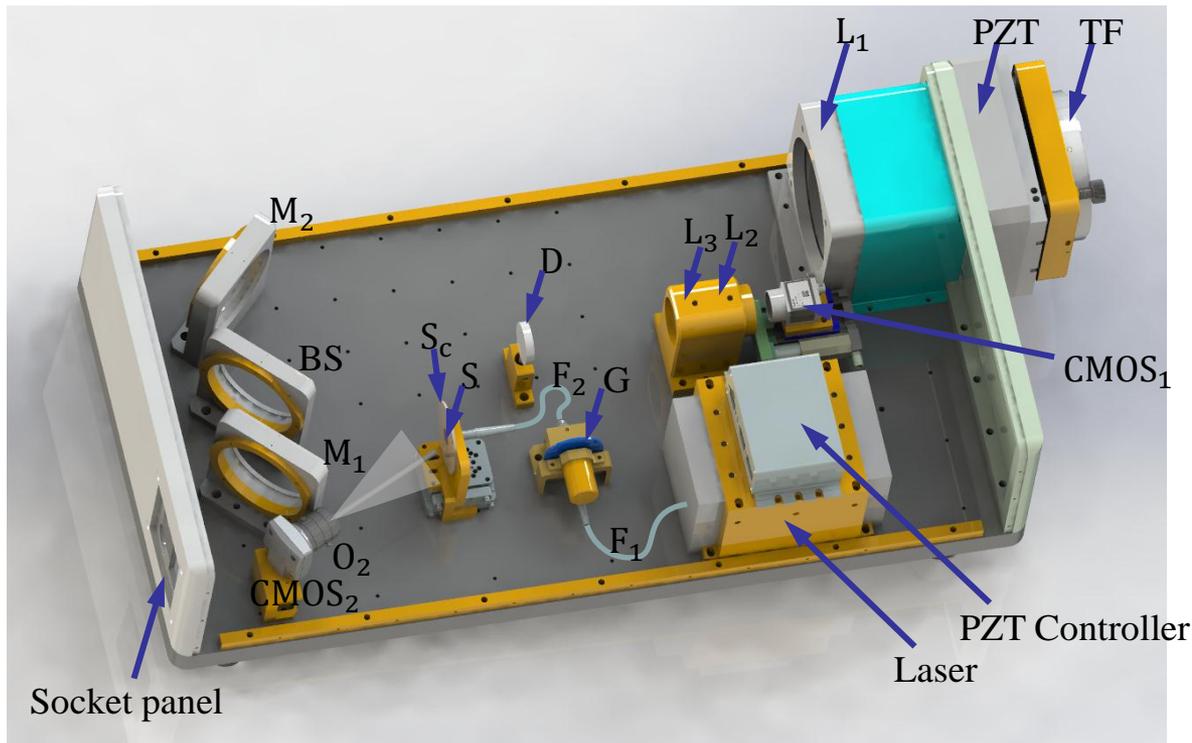

System composition

Scheme of Optical design

2. Principles

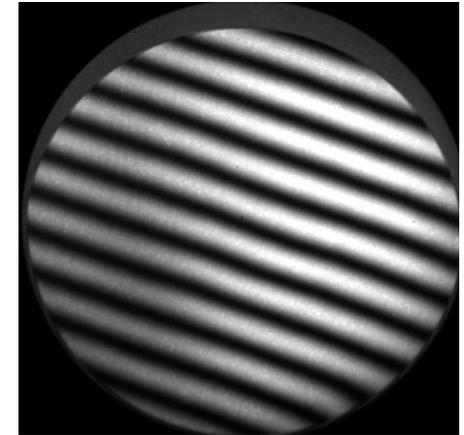

Mechanical design

Scheme of mechanical design

Advantages:

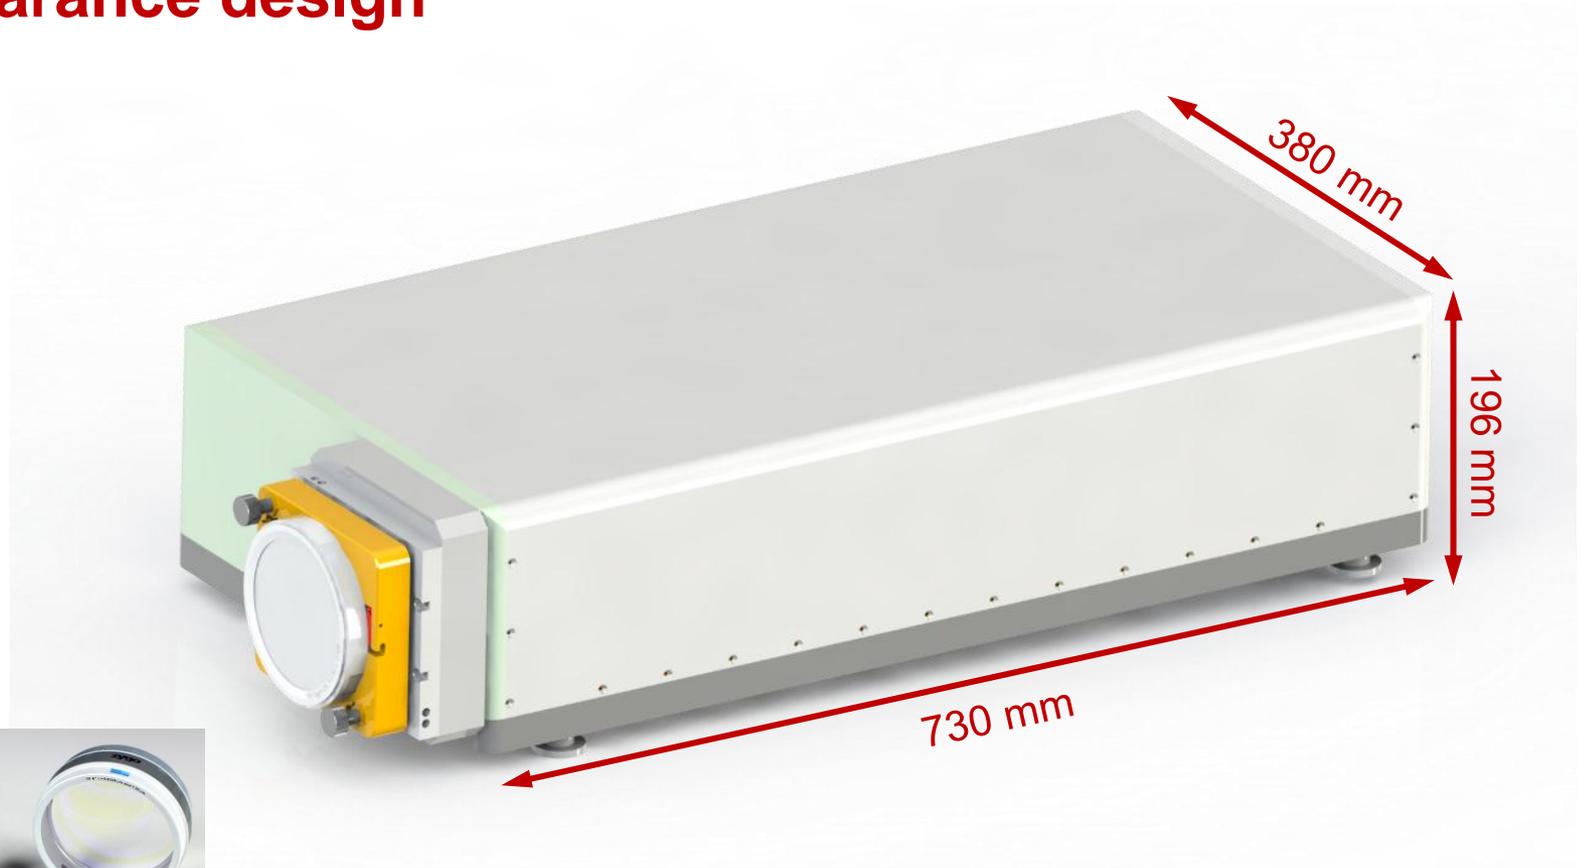

1. Simple structure
2. Compact design
3. Pure interferogram

2048×2048 fringe

2. Principles

Appearance design

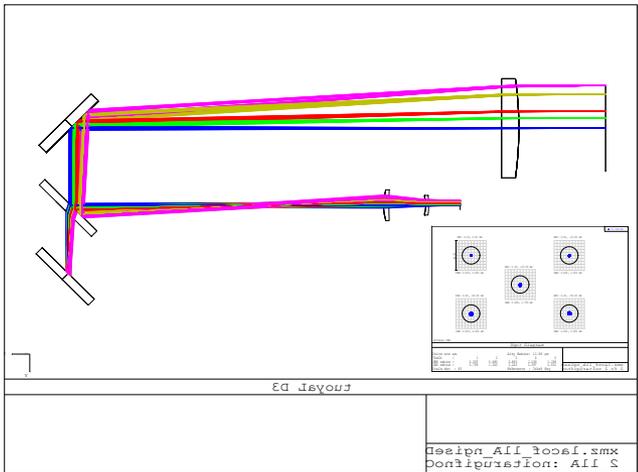

Universal TF mount

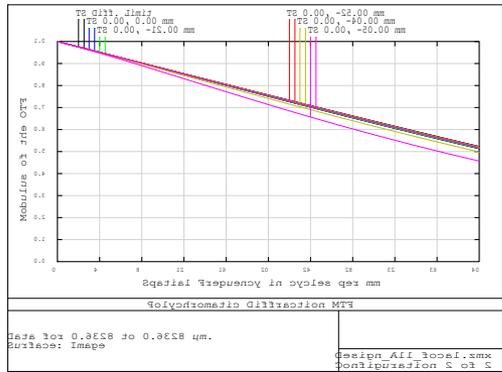

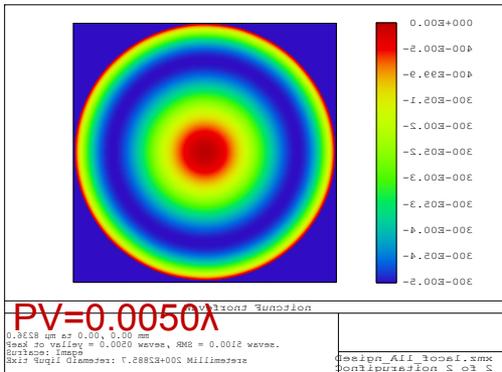

2. Principles

Optical design

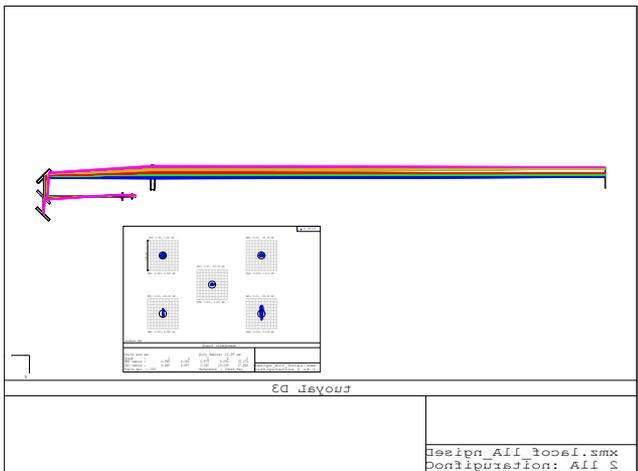

2. Imaging aberration design

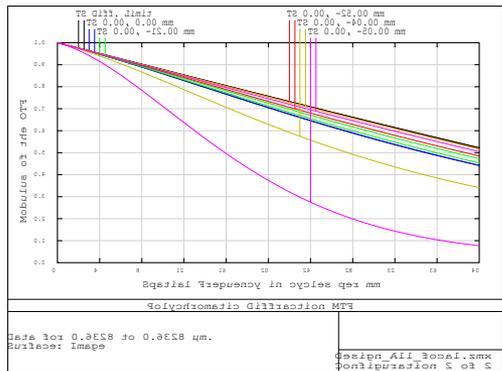

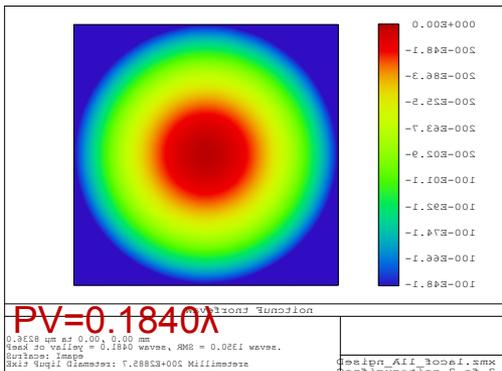

Imaging aberration of near object

Wavefront map and MTF curves

Imaging aberrations of distant object (2 m cavity)

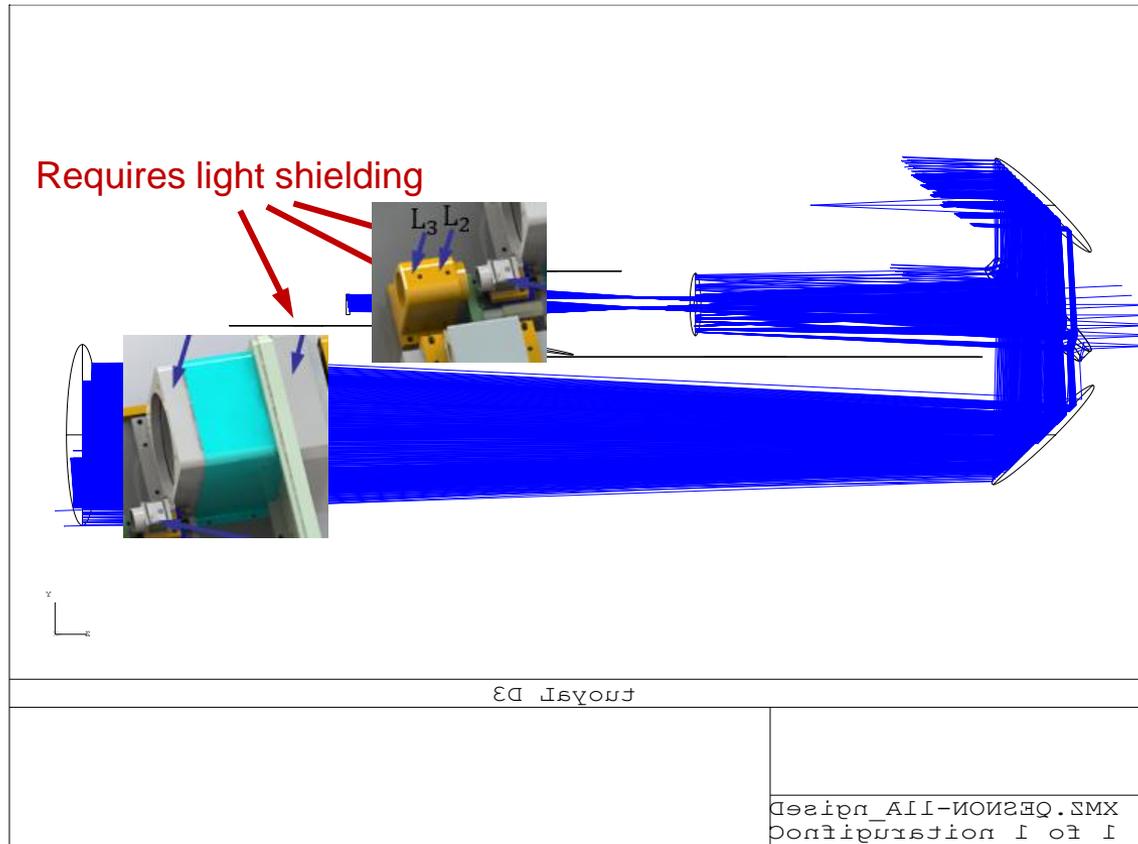

Wavefront map and MTF curves

2. Principles

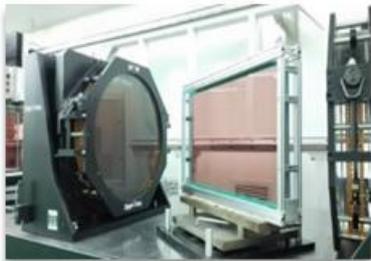

Optical design

3. Stray light shielding design

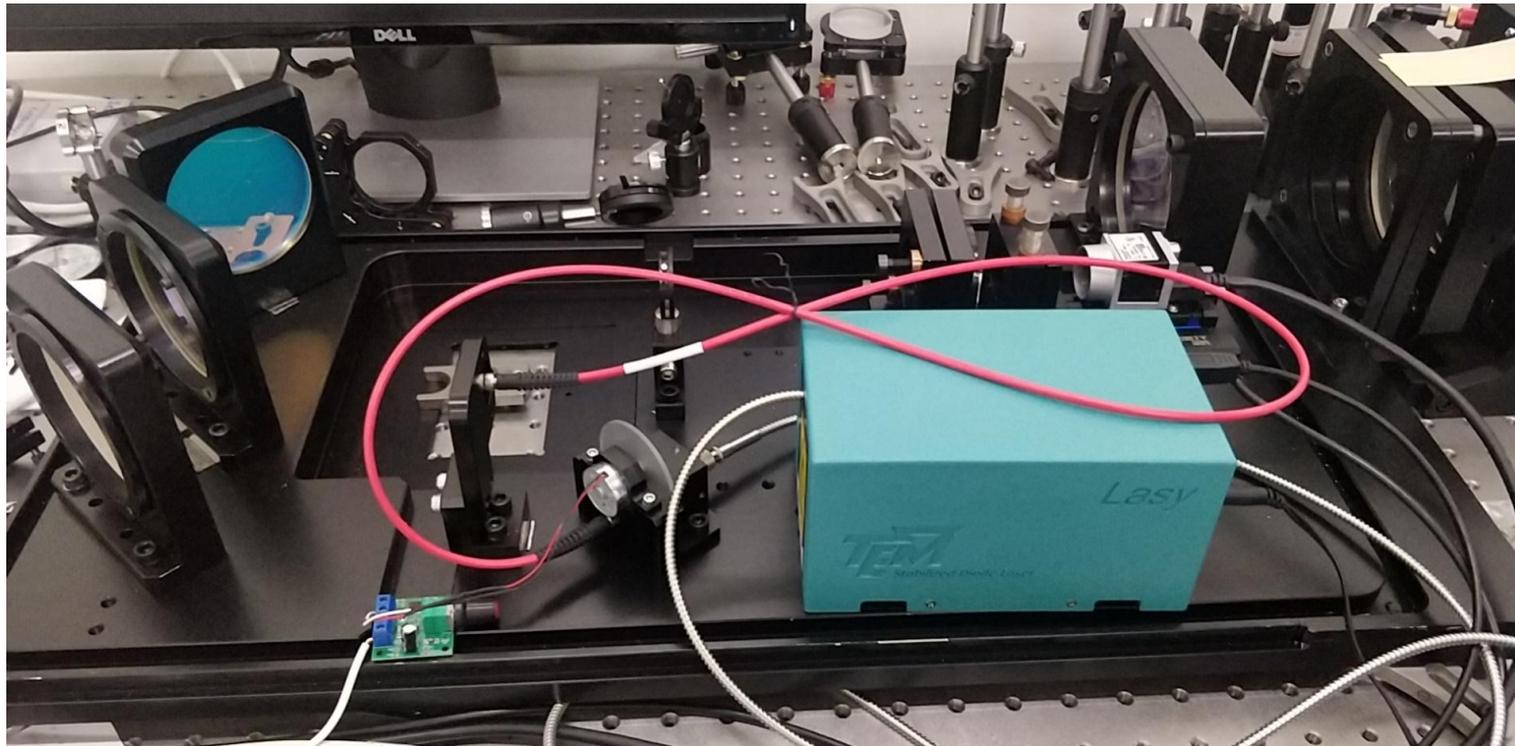

Outline

- Motivation
- Design progress
- **Current progress**
- Future works

3. Current progress

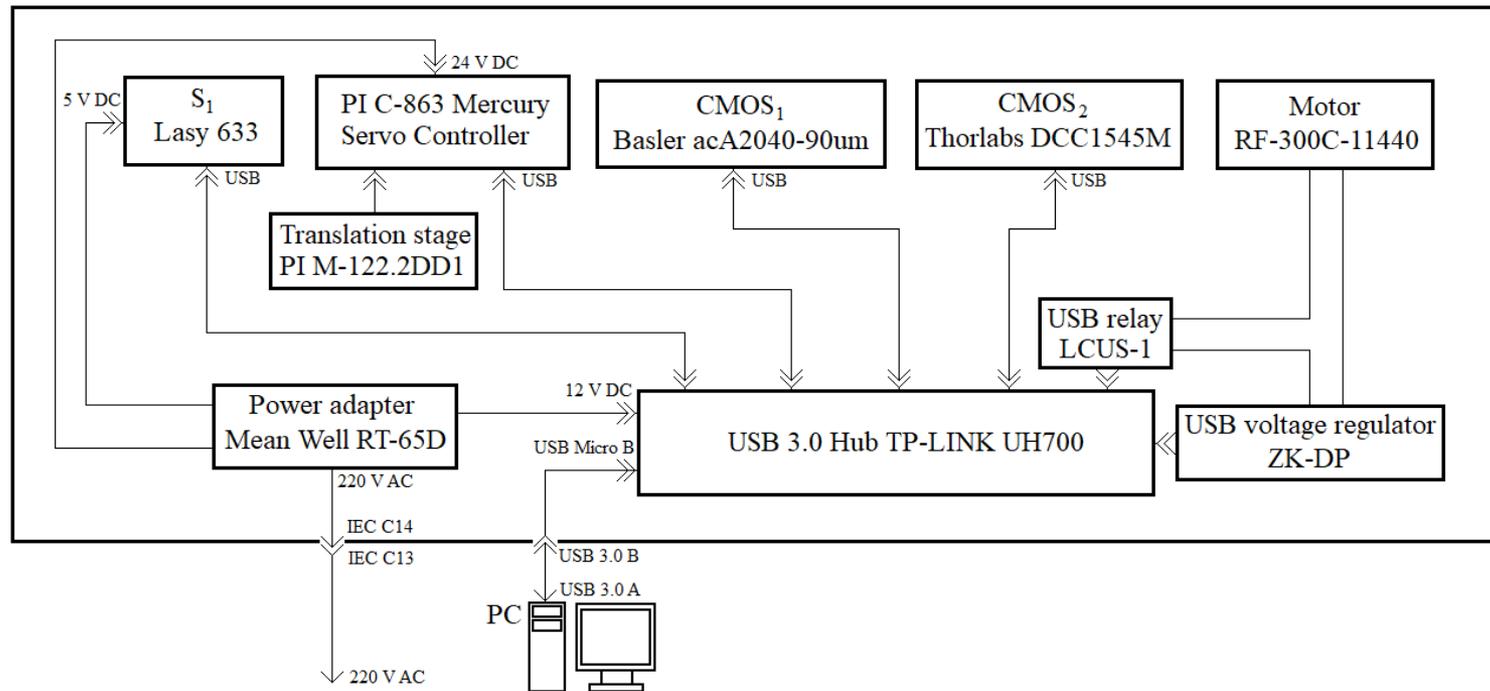

Assembly process

Interior diagram of the 4" laser interferometer mainframe

3. Current progress

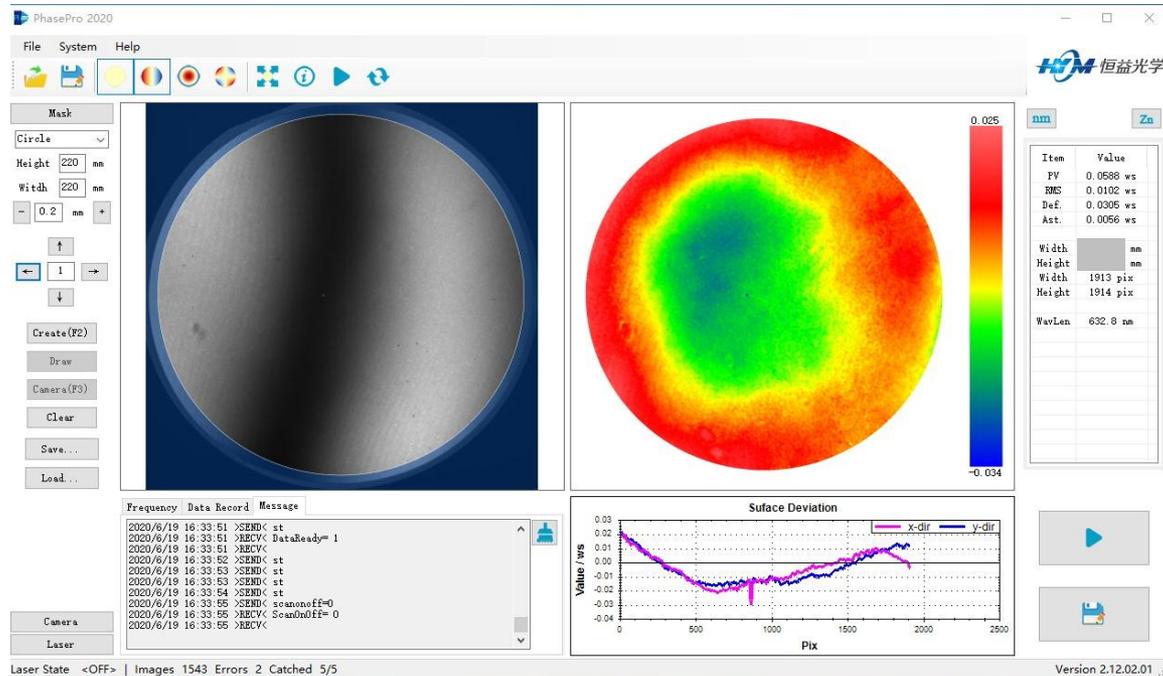

Electric control diagram

Electric control diagram

3. Current progress

Measurement software – “PhasePro”

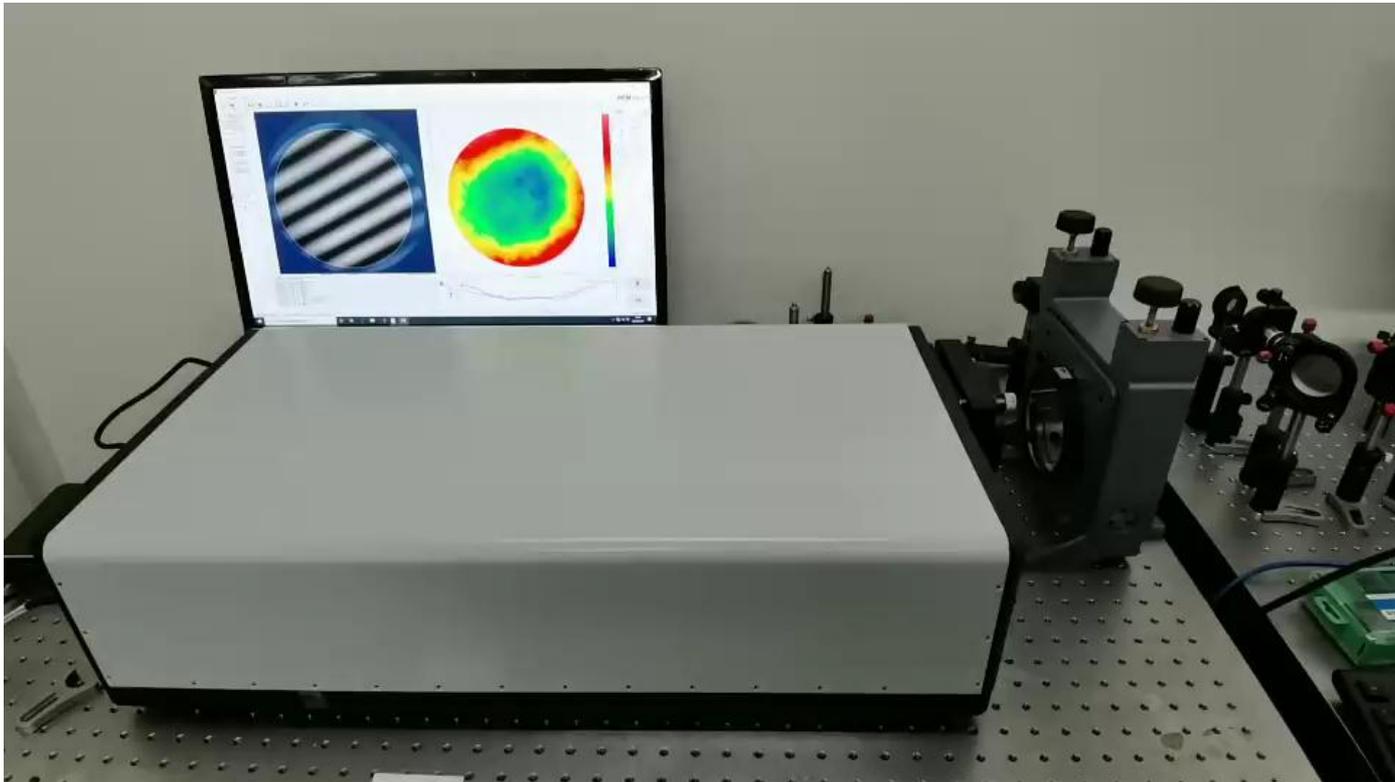

Main functions:

1. Real-time display of the interferogram
2. Mask, Camera, Laser settings
3. Calculation and analysis of PV, RMS, Def., Ast., etc.
4. Zernike polynomial coefficient fitting
5. 2D and 3D surface profile distribution
6. Measurement of optical homogeneity (Δn)

...

3. Current progress

1st China-Russia 4" laser interferometer mianframe

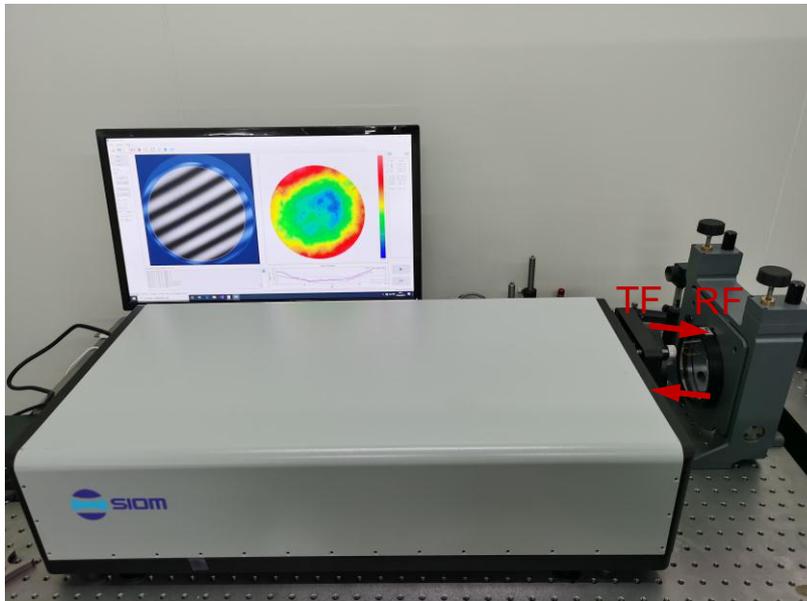

Video recording after installation

3. Current progress

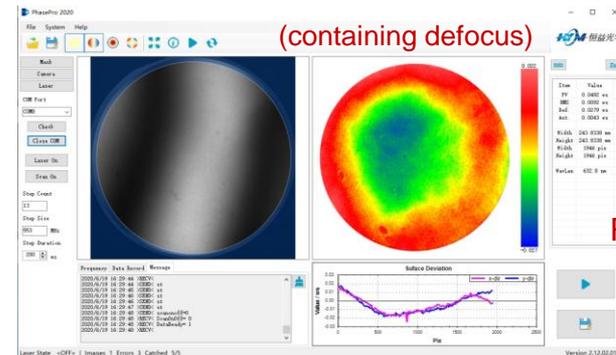

Cavity measurement

- Acceptance criteria: $PV < \lambda/10$

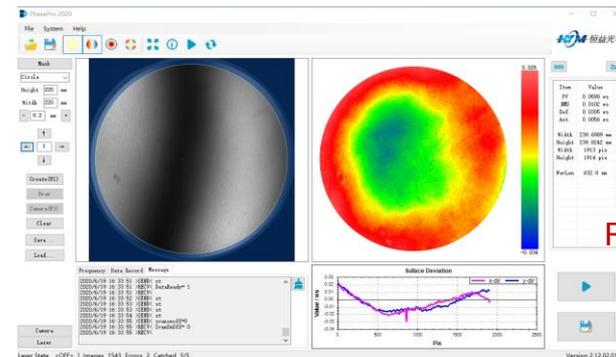

Cavity measurement ($\Phi 100$ mm)

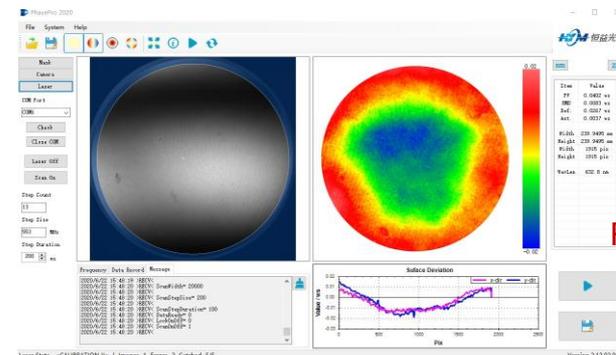

Measurement results

PV=0.0492 λ
RMS=0.0092 λ

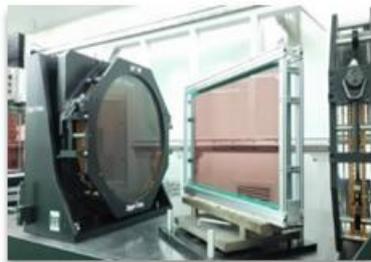

PV=0.0588 λ
RMS=0.0102 λ

PV=0.0402 λ
RMS=0.0083 λ

Outline

- Motivation
- Design progress
- Current progress
- **Future works**

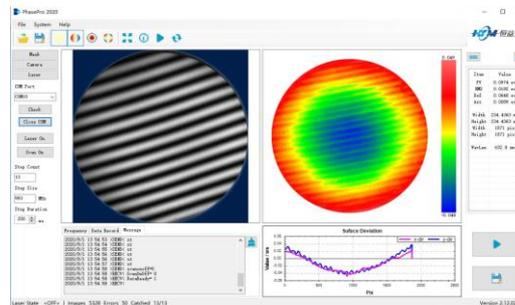

4. Future works

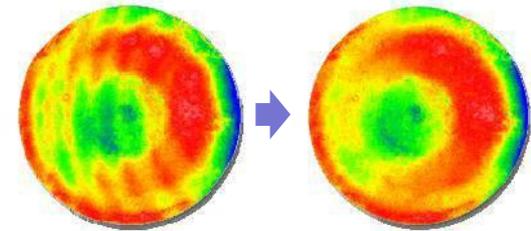

1. Software refinement

2. Anti-vibration

- Acquisition fringes > 5
- Ripple patterns appear

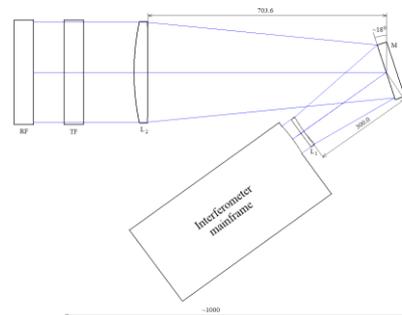

Ripple patterns

Anti-vibration

3. 24" Lage-aperture interferometer

- Component polishing is currently underway

Optical path design

Idea of appearance

Thank you!
